#### DETAILED ACTION

The 12/09/08 election of group I claims 1-21 without traverse is acknowledged. However, upon further review a species election is required.

#### *Election/Restrictions*

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species (I): spin coating, solvent casting, and dipping

Species (II): spraying and atomization deposition

Species (III): plasma deposition

Species (IV): chemical vapor deposition

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Species (I): spin coating, solvent casting, and dipping (claim 2)

Species (II): spraying and atomization deposition (claim 2)

Species (III): plasma deposition (claims 2 and 14)

Species (IV): chemical vapor deposition (claim 2)

An example species would be election of liquid coatings: spin, solvent and dipping of Species (I), non-elected Species (II)-(IV).

The following claim(s) are generic: 1, 3-13, and 15-21.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The special technical feature does not provide a contribution over the prior art because the special technical feature (namely the method of coating a substrate as recited in claims 1, 18, and 26 having a fluorinated polymer) is disclosed in WO 99/32235.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

#### NOTATION

Claims 8-12 are improperly multiply dependent claims. See MPEP § 608.01(n).
